# Recruit Release Notes Changes Launching 2017-05-17

Recruitments: Unified Applicant Page

We are cinching up our long running project to unify the applicant page! Now that all applicant management can be performed on the applicant manage page, we **removed the old manage pages**.

The Manage link will still remain in the app for now, but clicking the link will redirect users to applicant page and automatically initiate the applicant page tour.
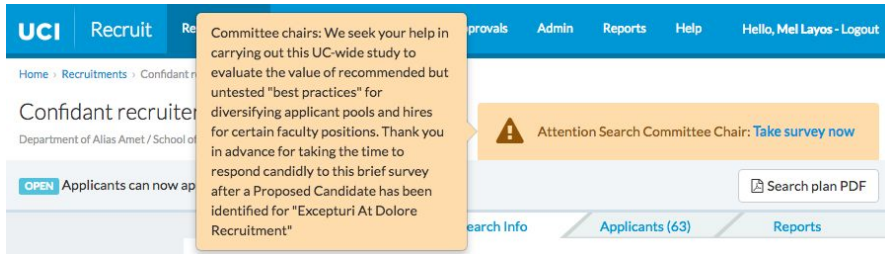

Navigation Update

As part of our general push toward improved accessibility, **we made the Recruit navigation responsive**. That means that the navigation bar at the top of the screen will no longer look broken when Recruit is accessed on a mobile device. It also means that users can magnify their browser windows 200% without breaking the view.

Recruitments: Committee Chair Survey

We've made a **minor visual change to the Committee Chair Survey banner** that allows us to reclaim some usable workspace on the screen. Committee chairs will still be told why their surveys are being requested, but they will only get this context by hovering over the banner.

Bugs 'n Stuff

- Analysts can now conclude basic recruitments when the search outcome is set to Candidates hired
- Applicant dashboard updates immediately after uploading final required document
- We removed the core feature flags descriptions from the Admin Features page
- Fixed an error from the previous launch that occurred when using the applicant manage page
