Good and Bad Department Letters
Departmental Letter - general

The departmental letter should represent the balanced and integrated opinions of the group. It should not be a Chair’s letter or an ad hoc letter. It should not be copied and pasted from a candidate’s personal statement. It should not be composed by a staff person. Be consistent in approach.
The department letter should strive to be as objective as possible. While discussion at the Department meeting will add important and very useful evaluative information, the letter writer must be sure that the statements gleaned from the discussion (good or bad) would stand up to scrutiny. Discuss

“The department letter should also not contain detailed discussion of the reasons for a leave of absence in instances where this may constitute a potential breach of confidentiality. “ Discuss
Departmental Letter - Research

• We need Context and Evaluative Comments.

• Evaluative comments such as “important breakthrough”, “first to show”, “only one to tackle such a difficult problem”, “technically very challenging”, “controversial and therefore more difficult to publish”, “years to accumulate data”, “chosen by faculty of 1000”, “will feed the world”, “most important prize in modern art”, “seminar presented at best-ranked philosophy dept. in US”, "curation at most important gallery in New York”, “twice the normal publication rate in the field” etc.

• Maybe priority score on an unfunded grant could be useful if the candidate is “between grants”

• Don’t use numbers ($1.97 million to candidate during this period) since there is then the obligation to check – “impressive success in extramural funding” – the numbers are elsewhere in a section where the candidate is attesting to their accuracy.
We often can’t judge if it’s outside our field, so we need your help. Anything can get published somewhere!

A paper by Maggie Simpson, Kim Jong Fun and Edna Krabappel was accepted by two scientific journals in 2014. "Fuzzy, Homogeneous Configurations." This was a nonsensical text, submitted by engineer Alex Smolyanitsky in an effort to expose a pair of scientific journals — the Journal of Computational Intelligence and Electronic Systems and Aperito Journal of NanoScience Technology.
Departmental Letter – Editorial Boards and Conference Committees

'Dr Fraud' experiment

• In 2015, four researchers created a fictitious sub-par scientist named Anna O. Szust ('Ószust' translates to 'a fraud' in Polish), and applied on her behalf for an editor position to 360 scholarly journals. Szust's qualifications were dismal for the role of an editor; she had never published a single article and had no editorial experience. The books and book chapters listed on her CV were made-up, as were the publishing houses that published the books.

• One-third of the journals to which Szust applied were sampled from Beall's List of 'predatory' journals. Forty of these predatory journals accepted Szust as editor without any background vetting and often within days or even hours. By comparison, she received minimal to no positive response from the "controls" which "must meet certain standards of quality, including ethical publishing practices." Among journals sampled from the Directory of Open Access Journals [https://en.wikipedia.org/wiki/Directory_of_Open_Access_Journals](https://en.wikipedia.org/wiki/Directory_of_Open_Access_Journals), 8 of 120 accepted Szust. The DOAJ has since removed some (but not all) of the affected journals in a recent purge. None of the 120 sampled journals listed in Journal Citation Reports (JCR) offered Szust the position.

• The results of the experiment were published in Nature in March 2017. Again, I receive invitations daily to be on editorial boards and conference committees for subject matter way removed from my expertise.

**Therefore, we need context in department letters when reporting on such items**
Teaching - Clearly demonstrated evidence of high quality in teaching is an essential criterion for appointment, advancement, or promotion. Under no circumstances will a tenure commitment be made unless there is clear documentation of ability and diligence in the teaching role. In judging the effectiveness of a candidate’s teaching, the committee should consider such points as the following: the candidate’s command of the subject; continuous growth in the subject field; ability to organize material and to present it with force and logic; capacity to awaken in students an awareness of the relationship of the subject to other fields of knowledge; fostering of student independence and capability to reason; spirit and enthusiasm which vitalize the candidate’s learning and teaching; ability to arouse curiosity in beginning students, to encourage high standards, and to stimulate advanced students to creative work; personal attributes as they affect teaching and students; extent and skill of the candidate’s participation in the general guidance, mentoring, and advising of students; effectiveness in creating an academic environment that is open and encouraging to all students, including development of particularly effective strategies for the educational advancement of students in various underrepresented groups. Discuss this and additions to student evaluations.
Departmental Letter- What we get and don’t need

Reiteration of numerical data in the file:

• Professor N has given 10 talks at national and international meetings. I receive about 10 invitations per day and I am not qualified for many. So now more than ever, it is important to let the reader know the importance of the venues in the field

• Professor O has published 16 items. Where? “Top journal” means nothing without context. If not in a traditional peer reviewed journal and yet the department considers an important publication, it is especially important to explain. Some books with chapters/articles are rigorously reviewed, while others are in books less so and edited by friends or even by the candidate. Is there “double counting”? They were credited as chapters and again as a book.

• Professor Q has curated 11 exhibitions. Importance of venue?

• Professor R has given 10 performances of this original composition/choreography. Importance of venue?

Departmental Letter

- Evaluate service contributions in terms of quality and time commitment and in terms of dept. and stage of career norms. The senate now keeps records of attendance at senate committees. You may request this information, but as in all things, this must be done for all candidates in the dept. if done for one.
Departmental Letter

If a new paper/exhibit etc was not listed when the requests for outside letters went out, make sure to say this in dept. letter.

Evaluate collaborative research - does it show dependence, does it result in research that could not otherwise be done, does it result in synergy, does it attract new kinds of funding etc? This is particularly important for promotion files. I don’t like percentages

Be balanced in the evaluation. Advocacy is a good trait, but if all faculty in the department all deserve an acceleration year after year, then the letter becomes useless

Less than optimal aspects of the file have to be addressed, but keep matters proportional

Explain all negative votes

10/2/2017
Of the first 147 files received in APO last year, 47 had to be returned to department—mostly for statements that should not have been in the departmental letter or candidate’s self statement.
